SK Quality Roofing — AI phone receptionist (demo)

Audience: leadership and owners evaluating a **live phone demo**—what it is, what to listen for, and how it could fit operations.

Printable PDF: [README.pdf]

Executive summary

Alex answers your inbound line like a trained front-desk teammate: callers can **schedule**, **reschedule**, or **cancel**; for new work, **address and ZIP** determine **whether you serve the area** and which **job types** apply. Callers can also ask **roofing questions** using **the same approved topics and FAQs as your website**—so answers stay **on-message** and staff spend less time repeating basics.

Why it matters	Fewer calls lost to voicemail or hold; **structured intake** (who, where, what's wrong, when to call back) for **CRM follow-up**; **after-hours and overflow** without adding headcount.
What this demo is	**Real voice and telephony** with **sample** bookings and visits—so you can stress-test the experience without touching production calendars or dispatch.
What production adds	Hook up **your CRM** / **field service** (e.g. **ServiceTitan**), **real availability**, and **live customer match**—same voice layer, real data.

Try it now

> **Phone: +1 (561) 250-5794**
> **E.164 / CRM:** `+15612505794`

Use any phone—voice call, no app. After the greeting, ask a **roofing question** or say you want to **schedule**, **reschedule**, or **cancel**.

What to listen for (about two minutes)

These calls show **ZIP-specific menus** and **out-of-area handling**—the important part is that **service rules follow your configuration**, not a generic script.

1. **Same ask, two ZIPs (menus differ)**
   Say you want an **estimate**. Try one call per address (or back-to-back):

   - **Delray Beach — ZIP 33444** — `123 East Atlantic Ave, Delray Beach, FL 33444`
   - **Boca Raton — ZIP 33431** — `150 E Palmetto Park Rd, Boca Raton, FL 33431`

   In this demo, **Boca** includes options such as **roof coatings** (and **metal** / **flat**) that **Delray** does not—**job types are tied to service area**.

2. **Out of area** — **ZIP 90210** with e.g. `9400 Wilshire Blvd, Beverly Hills, CA 90210`
   You should hear a **clear "outside our area"** response and **no booking**.

3. **FAQ** — e.g. *"What are common signs my roof needs repair?"* or *"How much does a roof replacement cost?"*
   Short, factual tone—not a hard sell.

4. **Booking (sample only)** — Complete intake with an in-area address (e.g. Delray example above). You get a **sample confirmation code**; **nothing is written to ServiceTitan or a live calendar** in this build.

5. **Reschedule** / **cancel (sample only)** — The demo assumes a **fixed "existing visit"** (tomorrow morning, roof repair) so every caller can run the flow. You'll get **sample** confirmations, not real schedule changes.

Demo vs production (decision-ready)

Included in this demo

- **Voice** and **phone path** representative of a production-style deployment.
- **Regional rules** (ZIPs, job-type menus, FAQ) driven by **real configuration** in the repo—adjustable without rewriting the core agent.
- **Booking** / **reschedule** / **cancel** return **placeholders** so you can evaluate conversation quality safely.

Typical path to production

- **CRM** / **FSM integration** so appointments and jobs are **created and updated for real**.
- **Schedule and dispatch** so offered times reflect **crew capacity**, not samples.
- **Customer recognition** (phone / account) for **returning callers** and **existing work**.
- **Routing and alerts** so **large jobs or replacements** surface to **desk or manager** workflows.
- **Optional:** recordings, transcripts, analytics, SMS/email confirmations, handoff queues—same assistant, **your** operational stack.

Platform note

The assistant uses **real-time voice** suitable for **cloud** hosting and **standard business telephony**. Callback quality benefits from **SIP caller ID** when your carrier provides it.

Ongoing changes (no rebuild every time)

Service areas, **job-type menus**, and **FAQ content** are maintained as **editable configuration**—you can adjust **coverage and messaging** as the business changes, without throwing away the voice layer.

Maintainers: after editing this README, refresh the PDF with `uv run python scripts/render_readme_pdf.py`.
